# LTPS

**Loading Transfer Platform System**

«Les Aciers Solider» manufactures the LTPS, a patented equipment. The LTPS facilitates the transfer of merchandises from one trailer to another without modifying the disposition of the load. Easy to operate, it only needs one person to maneuver it. The LTPS easily adapts to various types of loads (light or heavy merchandises). The effectiveness, robustness and above all the rapidity of LTPS explain its good reputation.

### **LTPS means:**

- Space saving
- Maximum load of 40 tons
- Unusual timeliness
- Easy maintenance
- Maximization of transportation costs

### **Working with the LTPS**

The truck aligns its trailer in order to line up its load with the platform of the LTPS. With the hydraulic control, the operator slides the *fingers* of the LTPS under the merchandise in order to lift the entire load in only one-step. Then, the trailer is withdrawn to make room for a second trailer on which the same goods are deposited. The goods are handled in the air, which facilitates its disposition on the second trailer. This transshipment operation lasts no more than 20 minutes and requires only one employee.

### **Why use a LTPS as a means of transshipment?**

The L.T.P.S makes it possible to store the goods on old trailers until the moment of delivery. As soon as the customer requires the goods, an employee uses the L.T.P.S to transfer the goods from the old trailer to a trailer complying with road regulations. This strategy saves large sums of money, as the good trailers do not remain immobile in the warehouses pending the delivery of the goods. In addition, transshipment using the LTPS avoids the use of a lift, a crane, etc.
